Figure 1 is a graph showing the relationship between height (高さ) in meters and horizontal distance (水平距離) in meters for various illuminance levels (lx). The vertical axis represents height (0 to 5m) and the horizontal axis represents distance (4m to 0m to 4m). Contour lines for 1000, 500, 200, 100, and 50 lx are shown. Two specific curves are labeled 51° and 59°. The graph is divided into two sections: A-A on the left and B-B on the right.
